What We Do

How We Do It

Employment

1. **We take people to work.** 60% of all transit trips are to employment destinations, highlighting the industry's role in keeping America working.
2. **Transit is an employer, too.** Around the nation, transit employs hundreds of thousands with good-paying jobs.
3. **Businesses understand.** Employers — as exemplified by the US Chamber of Commerce — support increased transit infrastructure investment for the economy.
4. **Diversified.** Increasingly, transit is embracing vanpools, rideshare, telework and more to provide more cost-effective connections to jobs.

Affordability

1. **Not one size fits all.** Today's transit providers incorporate a variety of service modes to cost-effectively meet community needs.
2. **Partners.** Community and public transit partners with human and social service agencies and the private-sector to create valuable outcomes.
3. **Value.** From boosting land prices to attracting millennials to encouraging business development, transit adds value to the community.
4. **Technology.** Transit systems deploy state of the art technology to provide more cost-effective service.

Health Care

1. **Managing chronic conditions.** With chronic illnesses increasingly being treated on an outpatient basis, transit is the key to good health care outcomes and far more economical than emergency ambulance trips.
2. **Making dialysis possible.** For many Americans on dialysis, transit is a life-sustaining service.
3. **Serving those who serve the nation.** Transit is a vital connection for veterans and their families to VA clinics and facilities.
4. **Healthy communities.** Studies show that communities that rely on community and public transportation are healthier communities.

Innovation

1. **Real-time.** From mobile apps to next bus technology to simplified fare systems, transit is deploying breaking technologies to better serve its passengers.
2. **A safe ride.** Studies show that community and public transit passengers are riding the safest surface transportation mode in the nation.
3. **Service modes.** Regional services and deviated routes are making transit more responsive to more Americans.
4. **Innovation = ridership growth.** All forms of transit have seen ridership growth in the past decade. In 2013, ridership in communities under 100,000 population was the fastest growing.
